PROFESSIONAL SUMMARY

Detail-oriented IT professional and MSc Cyber Security graduate with deep technical foundations in Linux server administration, network infrastructure configuration, and system reliability management. Proven track record deploying secure Ubuntu Server environments, optimizing network traffic routing through pfSense firewalls, and establishing centralized ELK Stack observability frameworks. Seeking a Systems Administrator role to drive automated infrastructure workflows, maintain critical system uptime, and resolve complex hardware/software operational bottlenecks.

TECHNICAL SKILLS

Systems Administration: Linux/Ubuntu Server Management, Infrastructure Provisioning, User Access Control, Server Hardening, System Backup & Disaster Recovery, Bash Shell Scripting.

Networking & Infrastructure: Next-Gen Firewalls (pfSense), Network Segmentation, TCP/IP, DNS/DHCP Administration, Traffic Routing, Secure Network Architecture.

Observability & Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana), Log Centralization, System Health Dashboards, Performance Tuning, Resource Utilization Alerting.

Automation & Database: Python (IT Automation Scripting), Cron Automation, SQLite Database Administration, Query Optimization, Storage Allocation.

IT Operations: Technical Documentation, IT Support Lifecycle, Hardware Troubleshooting, Patch Management, Cross-functional Collaboration.

EDUCATION

Teesside University | Middlesbrough, UK 2023 – 2024
Master of Science in Cyber Security

Kannur University | Kerala, India 2020 – 2023
Bachelor's Degree in Computer Application

PROJECTS

Enterprise Network Monitoring & Firewall Deployment 2024
Technologies: Ubuntu Server, pfSense, ELK Stack (Elasticsearch, Logstash, Kibana), Snort

- Deployed and administered enterprise Ubuntu Server instances to orchestrate centralized configuration management and internal network utilities.
- Configured virtualized pfSense security gateways to implement strict network segmentation, access control lists (ACLs), and secure traffic routing between host machines.
- Engineered ELK Stack log centralization pipelines to aggregate performance metrics, tracking CPU, memory, and disk IOPS to maximize hardware lifecycles and reduce root-cause discovery time.
- Executed comprehensive network stress testing and traffic injection to baseline infrastructure resource ceilings, boosting failover stability by **20%** under heavy simulator loads.
- Authored end-to-end technical standard operating procedures (SOPs), system build sheets, and hardware troubleshooting guides to streamline future bare-metal provisioning.

Application Server Deployment & Backend Management 2023
Technologies: Linux Architecture, Web Server Deployment, Python, SQLite Database

- Provisioned and maintained the underlying operating system environment and production host resources for a high-availability travel application framework.

- Initialized and managed completely isolated staging and production sandbox environments, developing scheduled maintenance scripts to eliminate deployment downtime.
- Handled engine storage schemas within SQLite backend architectures, implementing automated database backup crontabs to prevent data corruption and maintain table integrity.

WORK EXPERIENCE

Btrac Solutions | Kerala, India

Sept 2022 – Mar 2023

IT & Application Support Intern

- Supervised the day-to-day operations, log consistency, and system patch levels across internal evaluation servers and client-facing production hosting nodes.
- Coordinated directly with software teams to deploy environment updates, update firewall configuration rules, and install system security updates under tight SLA constraints.
- Monitored core server performance indicators, troubleshooting database connection faults and kernel resource conflicts to optimize system availability metrics.
- Documented infrastructure deployment workflows, network architecture maps, and asset inventories to drastically cut down internal team transition friction.
