PROFESSIONAL SUMMARY

Detail-oriented MSc Cyber Security graduate with hands-on experience in network defense, intrusion detection, and secure application development. Proficient in implementing and monitoring enterprise-grade SIEM solutions (ELK Stack/Splunk environment), configuring firewalls (pfSense), and conducting comprehensive threat analysis mapped to the MITRE ATT&CK framework. Seeking a Cybersecurity Analyst or SOC Analyst role to leverage strong academic foundations and practical project engineering experience in identifying vulnerabilities, mitigating risks, and executing incident response protocols.

TECHNICAL SKILLS

Cybersecurity Operations: Incident Response, Threat Hunting, Log Analysis, Network Traffic Analysis, Packet Analysis (Wireshark), Vulnerability Assessments, Incident Documentation.

Security Architecture: Intrusion Detection & Prevention (Snort IDS), Next-Generation Firewalls (pfSense), SIEM Systems (ELK Stack, Splunk familiarity), Linux/Ubuntu Server Administration.

Frameworks & Compliance: OWASP Top 10, NIST Cybersecurity Framework (CSF), MITRE ATT&CK Mapping.

Programming & Scripting: Python (Security Automation), C, C++, Java, JavaScript.

Web & Application Security: Django, REST APIs, SQLite, Secure Authentication Workflows, Cryptographic Session Management.

EDUCATION

Teesside University | Middlesbrough, UK 2023 – 2024
Master of Science in Cyber Security

Kannur University | Kerala, India 2020 – 2023
Bachelor's Degree in Computer Application

PROJECTS

Intrusion Detection & Threat Monitoring System (IDS) 2024
Technologies: Ubuntu Server, pfSense Firewall, Snort IDS, ELK Stack (Elasticsearch, Logstash, Kibana)

- Designed and deployed an integrated Intrusion Detection System to actively monitor, detect, and isolate unauthorized network traffic anomalies and data exfiltration patterns.
- Configured a pfSense firewall interface and integrated Snort IDS to establish real-time threat detection, manage access control lists (ACLs), and automate network defense policies.
- Engineered and fine-tuned **15+ custom detection rules**, reducing false-positive alerts by **20%** while expanding defensive visibility against critical CVEs mapped to MITRE ATT&CK vectors.
- Deployed the ELK Stack to aggregate high-volume syslog data, construct interactive Kibana security dashboards, and generate actionable threat intelligence documentation.
- Executed **4 distinct simulated network attack vectors** (including DoS, Brute Force, and Port Scanning) to validate system resilience, packet capture (PCAP) accuracy, and response speed.

TrippyGo – Secure Full-Stack Web Application 2023
Technologies: Python, Django, HTML, CSS, SQLite

- Developed a full-stack travel management web application from scratch, prioritizing modern data protection standards, input sanitization, and secure user interactions.
- Implemented robust user authentication workflows, cryptographic session management, and strict

form field validation to systematically eliminate SQL injection (SQLi) and XSS vulnerabilities.

- Applied MVC architecture principles to guarantee scalable, secure backend database handling, and successfully validated system integrity within a simulated production environment.

WORK EXPERIENCE

Btrac Solutions | Kerala, India

Sept 2022 – Mar 2023

Web Application Development Intern (Secure Coding Focus)

- Developed and maintained critical, secure web components utilizing Python and the Django framework to scale secure application architecture.
- Implemented object-relational mapping (ORM) database integrations and secure cryptographic authentication protocols to safeguard sensitive user data integrity.
- Championed secure coding initiatives by conducting routine code reviews, proactively identifying and mitigating **OWASP Top 10 vulnerabilities** prior to production release cycles.
- Collaborated closely with engineering squads to securely deploy patches across staging environments, tracking performance optimizations that reduced page response latencies and system exposure.
